

Excellent bounce for daily use in pools and general sports use  
Durable, maintenance-free, robust flexible board  
Silicone carbide cover provides superb grip  
Special manufacturing technique  
5-year stability guarantee if properly assembled, tested in accordance with DIN 13451-10

The fibreglass diving board is made using a special process and impresses with great spring for daily use in pools and for general sports use. The robust fibreglass board is resistant to dampness, is robust, flexible and maintenance-free. The silicone carbide cover on the diving board gives it excellent grip. We recommend that it should be sprinkled with water on a daily basis to clean the upper surface.

**The following are included for assembly of the end hinge:**

fixing bolts  
upper panel  
rubber intermediate panel

**The illustrated orange bottom section is not included.**

**Our tip:**

Order a new end hinge for a new board. This increases the lifespan of the board.

**Recommendation:**

In accordance with standards, this product should only be installed by a specialist company. Should you have any questions or are unsure, feel free to send us pictures for inspection. We will use these to determine whether installation can be carried out.

For glass fibre diving boards  
Consists of: roller substructure and hinged end bracket  
Galvanised steel  
Incl. 2 u-shaped iron beams for additional height
