

The fibreglass diving board is made using a special process and impresses with great spring for daily use in pools and for general sports use. The robust fibreglass board is resistant to dampness, is robust, flexible and maintenance-free. The silicone carbide cover on the diving board gives it excellent grip. We recommend that it should be sprinkled with water on a daily basis to clean the upper surface.

The following are included for assembly of the end hinge:

- fixing bolts
- upper panel
- rubber intermediate panel

The illustrated orange bottom section is not included.

- For glass fibre diving boards
- Consists of: roller substructure and hinged end bracket
- Galvanised steel
- Incl. 2 u-shaped iron beams for additional height
